SMRT36
Megger Relay Test System

- Small, rugged, lightweight and powerful
- Operate with or without a computer
- Intuitive manual operation with Smart Touch View Interface
- High current, high power output (60 Amps/300 VA rms) per phase
- Convertible channels provides 6 currents
- Network interface provides IEC 61850 test capabilities
- Optional transducer test capability
- Fully automated testing using AVTS Software

DESCRIPTION
For size, weight, and features the SMRT36 is conceivably the smallest, lightest, highest output powered, complete three phase relay test system in the world today. The test system may be customized by adding the number of Voltage-Current, “VIGEN”, modules needed for specific test applications. The SMRT36 has the “smart” combination of high compliance voltage and high current to test all electromechanical, solid-state and microprocessor-based overcurrent relays, including voltage controlled, voltage restraint and directional overcurrent.

The SMRT36 with three VIGEN Modules provides a complete three-phase test system for commissioning of three phase protection systems. With the voltage channels converted to currents, the same unit can provide 6-phase current. The SMRT36 VIGEN modules also provide high power in BOTH the voltage and current channels to test virtually all types of protective relays.

The SMRT36 test system has the ability to be manually controlled with Megger’s new Smart Touch View Interface™ (STVI). The STVI, with its large, full color, high resolution, TFT LCD touch screen allows the user to perform manual, steady-state and dynamic testing quickly and easily using the manual test screen, as well as using built-in preset test routines for most popular relays.

The STVI eliminates the need for a computer when testing virtually all types of relays. Menu screens and touch screen function buttons are provided to quickly and easily select the desired test function. Tests results can be saved to the STVI for download to a memory stick to transfer or print test reports.

For full automatic testing the SMRT36 may be controlled by Megger Advanced Visual Test Software (AVTS). AVTS is a Microsoft® Windows® XP®/Vista™/7 compatible software program designed to manage all aspects of protective relay testing using the new Megger SMRT.

APPLICATIONS
Each current channel is rated for 30 Amps @ 200 VA continuous, up to 60 Amps @ 300 VA for short durations. It has a unique flat power curve from 4 to 30 Amps that insures maximum compliance voltage to load at all times. Three currents in parallel provide up to 180 Amps @ 900 VA for instantaneous tests. With a maximum compliance voltage of 50 Volts per phase, with just two channels in series provides 100 Volts of compliance voltage to test high impedance relays.
Each voltage channel can provide variable outputs of 0- 30/150/300 Volts at 150 VA of output power, and has a unique flat power curve from 30 to 150 Volts insuring maximum output power to the load at all times. With the voltage channel converted to current, a three channel unit can provide 6 currents for testing three phase current differential relays, including harmonic restraint transformer differential relays.

Using the Ethernet ports, the SMRT36 is literally a “plug-and-play” unit, where voltage and current outputs can be seamlessly synchronized with other SMRT units outputs for testing more complex test applications such as back-to-back tests, or 9 up to 12 phase current test applications.

FEATURES AND BENEFITS

Constant Power Output – New higher powered Voltage-Current amplifiers. The current amplifier delivers maximum compliance voltage to the load constantly during the test, and range changing is done automatically under load. This insures better test results, and saves time by not having to turn the outputs off to change ranges. Constant power output in many cases eliminates the need to parallel or series current channels together to test high burden relays.

High Output Current – Provides up 30 Amps at 200 VA per phase continuous, or up to 60 Amperes at 300 VA with a 1.5 second duty cycle. The three current amplifiers can be paralleled to provide a maximum of 180 Amperes at 900 VA, for testing all instantaneous overcurrent relays.

New PowerV™ Voltage Amplifier High Power Output – The SMRT provides a new higher VA power output on the voltage channel at the lower critical test voltages (from 30 to 150 Volts). Customers who want to test a panel of relays at one time find it impossible using lower VA rated voltage.

Convertible Voltage Channels – With a 3 channel SMRT36 unit, convertible channels in conjunction with the three main current channels, provides 6 currents for testing three phase current differential relays. With all six currents in parallel the unit can provide a maximum single phase output of 225 Amperes for short durations.

High resolution and accuracy – Metered outputs provides extremely high accuracy needed for testing a wide variety of devices. With metered values, what you see is what you get.

Steady-State and Dynamic testing capability – The SMRT provides, either through manual control or computer control, both steady-state and dynamic testing of protective relays. This includes programmable waveforms with dc offset and harmonics.

Output current and voltage sine waves are generated digitally – Outputs do not vary with sudden changes in input voltage or frequency, which increases test accuracy and reduces testing time.

Modular design – Output modules plug-in and out easily for system re-configuration and maintenance.

Built-in Transducer Testing Capability – The SMRT36P incorporates high accuracy amplifiers, an optional transducer DC input and test algorithms to test transducers easily and effectively.

Digital binary inputs and outputs – The programmable binary inputs, and programmable outputs provide timing and logic operations in real-time with the output voltage and currents. Binary Inputs can be programmed, using Boolean logic, for more complex power system simulations. This provides a low cost, closed loop, power system simulator.

Circuit breaker simulator – Binary outputs provide programmable normally closed and normally open contacts to simulate circuit breaker operation for testing reclosing relays. Sequence of operation, timing, and lockout are easily tested.

Performs transient tests – Perform acceptance or troubleshooting tests by replaying digitally recorded faults or EMTP/ATP simulations in the IEEE- C37.111, COMTRADE Standard format.

Perform End-to-End tests – Using AVTS software and a portable GPS satellite receiver, the SMRT performs satellite-synchronized end-to-end dynamic multi-state or playback transient COMTRADE files either for commissioning or troubleshooting tests.

Wide-ranging output frequency – The output frequency of the current and voltage channels can be set for any frequency from dc to 1 kHz. Popular test frequencies such as 16.66, 25, 33, 50, 60, 100,120, 125, 150, 180, 250, 300 and 400 Hz are easily set and controlled. Multi-purpose test system saves time and money.

USB 2.0 interface port – The USB port provides a PC interface for automated control of the SMRT unit. Also provides secure isolation when testing IEC 61850 devices (for customers who require secure isolation from their IEC 61850 substation bus).

Three Ethernet ports – PC/OUT Ethernet Port is the primary PC connection port. The IN/IEC61850 Ethernet Port provides interface to multiple SMRT units, and may be used to connect to the IEC 61850 substation bus. The OUT Ethernet Port is primarily used to interconnect multiple SMRT units together for synchronous multi-unit operation. The STVI PoE (Power over Ethernet) port and is used to connect to the STVI.

Bluetooth – Optional Bluetooth provides more flexibility. A wireless interface between the PC and SMRT, in conjunction with the SMRT IEC 61850 Ethernet port, provides the isolation required for a secure substation access interface between the SMRT and the IEC 61850 substation network.

Universal input voltage – Operation from 90 to 264 Vac, 50/60 Hz, the SMRT can use virtually any standard source in the world.

Immediate error indication – Audible and visual alarms indicate when amplitude or waveforms of the outputs are in error.

Optional Transducer Testing Capability – This optional hardware feature (see Ordering Information) provides transducer DC inputs to test transducers easily and effectively. The STVI software is designed to automatically recognize the Transducer DC Inputs, and thus provide the Transducer Test Screen when selected. AVTS software comes standard with Transducer Test Modules, which will provide automatic transducer test capability in conjunction with the optional hardware.
SMRT36
Megger Relay Test System

1. **Binary Outputs 1 and 2**: Rated for 300 V at 8 Amps.
2. **Binary Inputs 1 and 2**: Rated 5 to 300 V AC/DC.
3. **Transducer Input**: (Optional) DC voltage and DC milliamp input terminals.
4. **Voltage Outputs**: Up to 3 channels 300 V at 150 VA, convertible to currents 15 A at 120 VA per phase.
5. **Current Outputs**: Up to 3 channels 60 Amps at 300 VA per phase. Up 180 Amps at 900 VA single phase.
6. **USB 2.0 Interface**: Communication and control port.
7. **Additional Binary Inputs**: Provides 8 additional monitor circuits.
8. **Rugged Case**: Fiberglass reinforced plastic.
9. **PC/OUT**: Ethernet Port is the primary PC connection port. Ethernet Port used to chain multiple SMRT units together for synchronous multi-unit operation.
10. **Additional Binary Outputs**: Adds 4 outputs. Binary Outputs 3 and 4 are rated for 300 V AC/DC, 8 amperes. Binary Outputs 5 and 6 are high speed and have an AC/DC voltage rating of 400 volts peak, 1 ampere.
11. **IN/61850**: This port may also be used for connecting to the IEC 61850 substation bus for testing IEC 61850 devices.
12. **STVI**: Ethernet Port is a PoE (Power over Ethernet) port and is used to connect to the STVI for manual control.
13. **Battery Simulator**: Variable 5 to 250 Volts DC output at 100 Watts (4 amperes maximum).
14. **Incoming Power/Line Cord Socket**: 100 to 240 V, 50/60 Hz.
15. **POWER ON/OFF Switch**: Illuminates when power is on.
16. **Protective Earth Ground Jack**.
17. **Bluetooth**: Bluetooth® provides wireless control.

**SPECIFICATIONS**

**Input Power**
The input voltage rating varies depending upon the style number. Universal units, the input voltage may be from 100 to 240 VAC, ± 10%, 50/60 Hertz. CE Marked units, the input voltage may be from 220 to 240 VAC, ± 10%, 50/60 Hertz. Total maximum output power will be limited for CE marked units. Input current required varies with the number of output modules in use, load, and input voltage value. With three VIGENS, the maximum input power is 1800VA.

**Outputs**
All outputs are independent from sudden changes in mains voltage and frequency, and are regulated so changes in load impedance do not affect the output. All amplifier outputs are isolated or floating. The SMRT units can be ordered with the amplifier common returns tied to chassis ground as an option.

**Output Current Sources**
The SMRT36 with three VIGEN modules can provide up to six current sources; three high current/high power, and three convertible channels providing lower current/high power. The per channel output current and power ratings are specified in AC rms values and peak power ratings.

**Current Amplifier - Extended Power Range**
The SMRT current amplifier provides a unique flat power curve from 4 to 30 Amperes per phase to permit testing of electromechanical high impedance relays, and other high burden applications, with an extended operating range up to 60 Amperes at 300 VA rms.

**AC Voltage Output**
Outputs are rated with the following Ranges:

<table>
<thead>
<tr>
<th>Output Volts</th>

**Duty Cycle:** Continuous

**With two voltages in series**
The output voltage and power doubles to provide 600 volts at 300 VA.

**Voltage Amplifier in Current Mode:**
The voltage amplifier is convertible to a current source with the following output capability. Output power ratings are specified in rms values and peak power ratings.

<table>

¹ Megger reserves the right to change product specifications at any time.

² PowerVTM voltage amplifier output current varies depending on the voltage setting on the 150 Volt range, see curve.
SMRT36
Megger Relay Test System

Battery Simulator
The SMRT36 with the P (Plus) option includes a battery simulator with a variable DC output voltage ranging from 5 to 250 Volts at 100 Watts, 4 Amps max, providing capability to power up relays with redundant power supplies. Voltage output is controlled via the Smart Touch-View Interface, or through AVTS software. The SMRT36 with the N option does not include a battery simulator.

Waveform Generation
Each output channel can generate a variety of output waveforms such as: DC; sine wave; sine wave with percent harmonics at various phase angles; half waves; square waves with variable duty cycles; exponential decays; periodic transient waveforms from digital fault recorders, relays with waveform recording capability or EMTP/ATP programs, which conform to the IEEE C37.111 COMTRADE standard format.

Metering
Measured output quantities such as AC Amperes, AC Volts, DC Volts or DC Amperes, and Time may be simultaneously displayed on the large, color TFT LCD touch screen. The AC and DC outputs display the approximate voltage/current output prior to initiation of the outputs. All accuracies stated are from 10 to 100% of the range at 50/60Hz.

AC Voltage Amplitude
Accuracy: ±0.05 % reading + 0.02 % range typical,
±0.15 % reading + 0.05 % range maximum
Resolution: .01
Measurements: AC RMS
Ranges: 30, 150, 300V

AC Current Amplitude
Accuracy: ±0.05 % reading + 0.02 % range typical,

Resolution: .001/.01
Measurements: AC RMS
Ranges: 30, 60A

DC Voltage Amplitude
Accuracy: ±0.1% range typical,
0.25% range maximum
Resolution: .01
Measurements: RMS
Ranges: 30, 150, 300V

DC Current Amplitude
Accuracy: ±0.05 % reading + 0.02 % range typical,
±0.15 % reading + 0.05 % range maximum
Resolution: .001/.01
Measurements: RMS
Ranges: 30A
Convertible Source in AC Current Mode
Accuracy: ±0.05 % reading + 0.02 % range typical,
±0.15 % reading + 0.05 % range or ±12.5 mA whichever is greater
Resolution: .001
Measurements: AC RMS
Range: 5, 15A

The DC IN input terminals
Range: 0 to ±10 V DC
0 to ± 20 mA DC
Accuracy: ±0.02% Typical
±0.05% Max FS
Measurements: Average

DC IN Volts
Range: 0 to ±10 V DC
Accuracy: ±0.001% reading + 0.005% range Typical
±0.003% reading + 0.02% range Max
Resolution: .001
Measurements: Average

DC IN Amperes
Range: 0 to ±1 mA DC
4 to ±20 mA DC
Accuracy: ±0.001% reading + 0.005% range Typical
±0.003% reading + 0.02% range Max
Resolution: .001
Measurements: Average

Environmental
Operating Temperature: 32 to 122° F (0 to 50° C)
Storage Temperature: -40 to 158° F (-40 to 70° C)
Relative Humidity: 5 - 90% RH, Non-condensing

Unit Enclosure
The SMRT unit comes housed in a rugged, virtually indestructible,
lightweight and ergonomic enclosure. It features a large oversized
rubber cushioned handle, and removable lid for use in tight spaces.

Dimensions
With the lid on:
14.2 W x 7.6 H x 12.0 D in.
(360 W x 194 H x 305 D mm)
With the lid off:
14.2 W x 7.2 H x 12.0 D in.
(360 W x 180 H x 305 D mm)
IEC Enclosure Rating: IP30

Weight
With the transit lid on: 27.9 lb. (12.55 kg)
With the transit lid off: 25.8 lb. (11.6 kg)

Conformance Standards
Safety: EN 61010-1
Shock: MIL-PRF-28800F (30 g/11ms half-sine)
IEC 60068-2-27 (15 g/11 ms half-sine)
Vibration: MIL-PRF-28800F (10-500 Hz, 2.05 g rms)
IEC 60068-2-6 (10-150 Hz, 2 g)
Transit Drop: MIL-PRF-28800F (10 drops, 46 cm), ISTA 1A

Electromagnetic Compatibility
Emissions: EN 61326-2-1, EN 61000-3-2/3,
FCC Subpart B of Part 15 Class A
Immunity: EN 61000-4-2/3/4/5/6/8/11

Protection
Voltage outputs are protected from short circuits and thermally
protected against prolonged overloads. Current outputs are
protected against open circuits and thermally protected against
prolonged overloads.

Communication Interfaces
Ethernet (2)
USB 2.0
Bluetooth (optional)

SOFTWARE
AVTS – STVI Basic
Every unit comes with AVTS Basic software and the PC version
of the STVI Basic software packages. AVTS Basic version includes
Online Vector control (for single and multi-state timing tests), Online
Ramp control (for automatic ramping of voltage, current, phase
angles or frequency) and Online Click-On-Fault (for dynamic tests of
impedance relays). Test results may be exported directly to Microsoft
Word. AVTS software includes a database for saving test results,
which can also provide the necessary information needed for system
reliability audits. See AVTS bulletin for more information.

The PC version of the STVI software includes the ability to bring all
STVI test data (from other STVI units) into file folders for retrieval,
review and printing whenever needed. See STVI bulletin for more
information.

AVTS Advanced
The AVTS Advanced version includes all the feature in AVTS Basic
plus the powerful Test Editor, Dynamic Control (includes dynamic
e nd-to-end testing capability, and waveform recording capability),
ASPEN OneLiner™ or Electrocon CAPE™ SS1 File Converter for
dynamic testing, and easy to use programming Tools for creating
and editing test modules. See AVTS bulletin for more information.

AVTS Professional
The AVTS Professional version includes all of the features of the
Basic and Advanced versions plus some other powerful test tools
and features. It includes the DFR Waveform Viewer, One-Touch™
Test for fully automatic tests, Modbus communication test
capability, and Waveform Digitizer to digitize scanned waveforms of
electromechanical over current time curves. See AVTS bulletin for
more information.

IEC 61850 GOOSE
The SMRT with the GOOSE enabled, in conjunction with the Megger
GOOSE Configurator (MGC) software, can be used in the testing or
commissioning of IEC 61850 compliant devices. See AVTS bulletin for
more information.

### DESCRIPTION OF SOFTWARE OPTIONS

**Included Software**

- AVTS Basic with STVI Application CD 81302

**Software Options**

- AVTS Basic with IEC 61850 Megger GOOSE Configurator, and STVI Application CD 1002-103
- AVTS Advanced with STVI Application CD 81570
- AVTS Advanced Test with IEC 61850 Megger GOOSE Configurator, and STVI Application CD 1001-106
- AVTS Professional with STVI Application CD 81571
- AVTS Professional Test with IEC 61850 Megger GOOSE Configurator, and STVI Application CD 1002-102

### DESCRIPTIONS OF HARDWARE OPTIONS

**Voltage/Current Module:** The SMRT36 unit can have up to a total of 3 voltage/current modules. Enter the number of desired Voltage / Current modules **1**, **2** or **3**.

**Future:** 0, Reserved for future use.

**Base Unit Options:** The first two channels provide **1** binary input and **1** binary output each. Enter **N** for No extra binary I/O or battery simulator. For the user who requires the extra binary inputs, outputs and/or the battery simulator enter **P** for Plus option.

**Smart Touch View Interface Option:** Enter the number **1** for the unit to come with the STVI, or enter the number **0** for without.

**Common Returns Option:** The floating returns option provides independent, isolated return terminals for each output channel. The grounded common returns option, the return terminals are interconnected internally and connected to chassis ground. The CE Mark **C** and **E** units are designed to operate with an input voltage of 220 to 240 Volts. The **F** and **G** units are designed to operate with an input of 100 to 240 V.

**Bluetooth Option:** For customers who wish to have a wireless control of the SMRT unit, enter the number **1** for the unit to come with the Bluetooth option, or enter **0** for without.

**Power Cord Option:** Customers can choose which type of power cord they want the unit to come with.

- **A** Option – NEMA 5-15 to IEC60320 C13 connectors, UL & CSA approved for countries with NEMA outlets.
- **I** Option – International color coded wires (light blue, brown and green with yellow stripe) insulation jacket stripped ready for male connector with IEC 60320 C13 connector.
- **E** Option – CEE 7/7 “Schuko” plug to IEC 60320 C13 connector is CE marked.
- **U** Option – United Kingdom power cord with IEC 60320 C13 connector, and 13 Amp fuse. CE Marked.

**Bluetooth Option:** For customers who wish to have a wireless control of the SMRT unit, enter the number **1** for the unit to come with the Bluetooth option installed. Enter **0** for without.

**IEC 61850 Option:** The SMRT36 in conjunction with the Megger GOOSE Configurator (MGC) software can be used in the testing or commissioning of IEC 61850 compliant devices. In order for the SMRT36 to be able to subscribe as well as publish GOOSE messages, the IEC 61850 feature needs to be enabled. Enter the number **1** for the unit to come with the IEC 61850 option enabled. Enter **0** for the unit without IEC 61850 enabled.
Hardware Options: S for Standard hardware. T for Transducer enabled.

Test Leads Option: Enter the number 1 for the unit to come with Test Leads. Enter 0 for the unit without Test Leads.

---

Test Leads and Accessories
All units come with a power cord (see Power Cord option), and Ethernet communication cable, and instruction manual CD. All other accessories vary depending on the options selected, see Table of Accessories.

---

**Optional Accessories Descriptions**

| Accessory Carry Case: Use to carry power cord, Ethernet cable, Optional STVI and test leads. | Qty. 1 ea. Part No. 2001-487 |
| Sleeved Pair of Test Leads: Keeps the test leads in pairs and from getting entangled. Sleeved Test Leads, one red, one black, 200 cm (78.7”) long, 600 V, 32 Amperes CAT II. | Qty. 3 pr. Part No. 2001-394 Qty. 6 pr. Part No. 2001-394 Qty. 2 pr. Part No. 2001-394 Qty. 3 pr. Part No. 2001-394 |
| Cable/Spade Lug Adapter (Small): Small lug fit most new relay small terminal blocks. Lug adapter, red, 4.1 mm, use with test leads up to 1000 V/20 Amps CAT II. | Qty. 3 ea. Part No. 684004 Qty. 6 ea. Part No. 684004 Qty. 12 ea. Part No. 684004 Qty. 3 ea. Part No. 684004 |
| Lug adapter, black, 4.1 mm, use with test leads up to 1000 V/20 Amps CAT II. | Qty. 3 ea. Part Number 684005 Qty. 6 ea. Part Number 684005 Qty. 12 ea. Part Number 684005 Qty. 3 ea. Part Number 684005 |
| Jumper Lead: Used to common returns together on units with floating ground returns, or parallel of current channels. Jumper lead, black, 12.5 cm (5”) long, use with voltage/current outputs, 600 V, 32 Amps CAT II. | Qty. 2 ea. Part Number 2001-573 Qty. 4 ea. Part Number 2001-573 |
| Sleeved Combination Voltage Test Leads: Keeps the test leads from getting entangled. Three common leads connect to the test set, which are interconnected down to one black common to connect to the relay under test. Sleeved Three Phase Test Leads, three red and black, 200 cm (78.7”) long, 600 V, 32 Amperes CAT II. | Qty. 1 ea. Part Number 2001-395 |
| Sleeved Combination Current Test Leads: Keeps the test leads from getting entangled. Three pairs of leads connect to the test set, with three pairs to connect to the relay under test. Sleeved Three Phase Test Leads, three red and black, 200 cm (78.7”) long, 600 V, 32 Amperes CAT II. | Qty. 1 ea. Part Number 2001-396 |

Note that the sleeved combination leads only come with the three module configuration.
Descriptions of Software

Included Software – Every unit comes with AVTS Basic and the PC version of the STVI Basic Test software packages.

AVTS Basic includes Online Vector, Online Ramp and Online Click-On-Fault controls, with the ability to import, save and execute relay specific test modules. The online tools of Vector and Ramp provide automatic pickup, or dropout tests as well as timing and multi-state dynamic tests. The Online Click-On-Fault tool is used to automatically determine the reach characteristics of single or multi-zone Distance relays using shot for single point tests, or Ramp, Pulse Ramp, or Binary Search tools along user defined search lines. Includes enhanced Relay Test Wizards for, Overcurrent, Differential, Voltage, Frequency and Distance relays.

The powerful STVI screens can be run directly from a PC providing both manual and automatic test capabilities. Intuitive menu screens and buttons are provided to quickly and easily select the desired test function. The Manual Test Screen power-up preset default values maybe automatically set from the user defined configuration screen. The user can select from a variety of test options including manual control using the cursor up down arrows or use the mouse control wheel to vary outputs. In addition a dynamic sequence test includes trip and reclose up to 9 operations. An automatic ramp, pulse ramp, or pulse ramp binary search is built in to determine pickup or drop out of relay contacts, or perform relay specific timing tests using the Timing Test Screen. A vector graph indicates the relative phase angles of all of the outputs. The user may select to have all output amplitudes metered to provide real time verification of all of the selected outputs, or have setting values displayed. The PC version of the STVI software includes the ability to bring all STVI test data (from other STVI units) into file folders for retrieval and review whenever needed. Each copy of the PC version of the STVI software is licensed for running on one PC. Additional run keys can be purchased separately.

Additional Software Options

AVTS Advanced includes all of the features of AVTS Basic in addition to the powerful Test Editor and test editor tools, which includes the Dynamic Control (with dynamic end-to-end test capability, and Recorder features) for developing sequential tests for virtually any function or measuring element within digital relays. In addition, it also includes S51 File Converter for ASPEN and CAPE dynamic test files, End-to-End DFR Playback test macros and basic programming Tools for creating and editing test modules. Test files created in Advanced Test can be used with AVTS Basic.

AVTS Professional with STVI Application

Professional Test includes all of the features of AVTS Advanced Test version plus the following additional specialized test tools. The DFR Waveform Viewer and Playback tools are used for viewing and analyzing IEEE C37.111 COMTRADE Standard files from digital fault recorders and microprocessor based relays. The DFR Waveform Viewer includes tools to recreate the analog and digital channels for playback into protective relays for troubleshooting or evaluation. It includes the capability to extend the prefault data as well as start the timer associated with the event to time relay operation. These playback test files can also be used in end-to-end tests to recreate the transient event and evaluate the protection scheme. Test files created in Professional can be used with Advanced Test and Basic. Also included is the One-Touch Test Editor Control Tool for fully automatic testing of microprocessor based relays using VB script files or Modbus communications to automatically download relay settings, and automatically test all the measuring elements within the relay based upon those settings. The Waveform Digitizer feature is also included in the Professional Test version of AVTS. It provides tools to create digital time curves for virtually any electromechanical relay time curve (that do not fit a time curve algorithm). It can even be used for digitizing scanned waveforms from a light-beam chart recorder.

IEC 61850 Megger GOOSE Configurator Software

The Megger GOOSE Configurator (MGC) provides easy to use tools for testing relays and substations using the IEC 61850 protocol. It is an optional software tool available with Basic, Advanced or Professional versions of AVTS Software; see Descriptions of Software Options above. The configurator provides relay test engineers and technicians the capability to import parameters from configuration files in the Substation Configuration Language (SCL) format, and/or capture GOOSE messages directly from the substation bus. All imported GOOSE messages will be unconfirmed messages. Only captured messages are confirmed messages due to the Capture feature of the MGC. Use the MGC Merge feature to compare imported SCL and captured GOOSE messages to verify all GOOSE messages needed to perform tests. Use them to configure the SMRT to subscribe to preselected GOOSE messages by assigning the data attributes to the appropriate binary inputs of the SMRT. Use the configurator to assign the appropriate binary outputs of the SMRT to publish GOOSE messages simulating circuit breaker status. After the appropriate assignments of binary inputs and outputs have been made, the test file can be saved for reuse. This provides both manual and automatic testing of the relay using either the STVI or AVTS software. Use standard test modules in AVTS to perform automatic tests. Use the Dynamic Control in AVTS Advanced or Professional to perform high speed trip and reclose tests, or use to perform interoperability high-speed shared I/O tests between multiple IED’s. The MGC provides mappings of Boolean and Bit Strings and/or simulation of STReut, Integer/Unsigned, Float and UTC datasets.
The Test Leads and Test Lead Accessories are an option. Test leads and accessories can be ordered with the unit, or later as a kit. The Deluxe Test Leads and Accessories Kit includes sleeved pairs of leads for use with the extra binary inputs/outputs/battery simulator option, as well as the three phase sleeved combination leads for voltage and current channels. The following test leads and test lead accessories are included in the Deluxe Test Leads and Accessories Kit in quantities shown.

### Description

### Additional Accessories (Not Included in the SMRT36 Test Leads Option or Deluxe Lead Kit)

Additional Optional Test Leads and Accessories can be ordered individually, see description and part numbers below. The following accessories and part numbers are in quantities of 1 each. Order the appropriate number required.

#### Individual (Non-Sleeved) Test Leads: Excellent for widely separated individual terminal test connections.

<table>

**Transit Case**

**Hard-Sided Transit Case:** Includes custom designed foam inserts for the SMRT unit and accessory case. Transit case includes retractable handle, polyurethane wheels with stainless steel bearings, double-throw latches, fold-down handles, and stainless steel hardware and padlock protection, with O-ring seal making the case water-tight, with an IP 67 rating. Tested and certified to US Department of Defense Standards for impact, vibration, and low/high storage temperatures. The case is small, and weighs only 25 pounds (11.25 kg). With a three channel SMRT 36 it is light enough to check as luggage on commercial airliners.

Rugged, hard-sided transit case (1 ea). 1001-632
